

# may arrive sooner than you

of the iPhone 16 models recently, you may think Apple is all done with a while. Perhaps not, as attention is now shifting to the upcoming year, another new iPhone sooner than you think. Apple's first new handset, 2025, will likely be the iPhone SE 4. We now have a clearer idea of might be launched.

Apple's Ajunews (via MacRumors), component manufacturer LG Innotek is in mass production of a camera module that will potentially be used in

as early as next month. The company will supply the front camera  
budget-friendly phone. The report also stated camera production often  
months before the final phone arrives on the market. A spring 2025  
iPhone SE 4 has long been rumored, and the report seems to back this
