

# British Sportscar Maker Jaguar Saw What Dylan Mulvaney Did For Bud Light's Sale and Decides It Wants to Jump On That Sinking Ship Too Plus: Tesla Launch

It's almost like one of those business comedies where the owner wants to tank the brand so that she can buy the outstanding shares for a pittance.

Like Major League but with a Trannymobile.

Below: Musk invited Trump to watch the latest Tesla rocket launch.

We were buggin' each other while we sat out the light  
We both popped the clutch when the light turned green  
You should of heard the whine from my screamin' machine  
I flew past LaBrea, Schwab's, and Crescent Heights  
And all the jag could see were my six tail lights  
He passed me at doheny then I started to swerve  
But I pulled her out and there I was  
At dead man's curve...

107 Car commercials have catered toward women buyers for some time now. Rarely do you see the man or father figure driving the car. It's usually the woman. It's always reverse-role s##t.

I've also seen them sneaking in glimpses of gaydom into the commercials - the recent volkswagon commercial with flashes of VWs thru the years - if you freeze the wedding scene it's two brides in the back. BMW had one also showing two young men briefly kissing - kind of subliminal advertising.

I'm glad I don't care anymore....it's not my world.

134 107 Car commercials have catered toward women buyers for some time now. Rarely do you see the man or father figure driving the car. It's usually the woman. It's always reverse-role s##t.

I've also seen them sneaking in glimpses of gaydom into the commercials - the recent volkswagon commercial with flashes of VWs thru the years - if you freeze the wedding scene it's two brides in the back. BMW had one also showing two young men briefly kissing - kind of subliminal advertising.

I'm glad I don't care anymore....it's not my world.

We don't focus on politics. We focus on making sure the brakes work correctly. We don't much care how you dress, talk or who associate with. We care about making sure you can safely get from point A to point B with peace of mind. Gas costs money...your money. We took that into account when we designed this car for you. See that? **206** Watching the SpaceX test on SpaceflightNow, when they did the water landing, there was a brief cut in the video of land -- with trees and grass -- instead of water, then the video went right back to water. The booster looked the same in the "land" cut as it did in the "on water" video. Very strange.

My dad and I did a double take so I rewound it a couple of times to see the cut again. I said, "Are we being bamboozled?!"

**207** 187 I am just waiting for one of these corporations to realize the absolute gold mine that exists for them if they take this approach in their commercials:

"See that? That's a car. Made in the USA by hard working employees. They concentrated on making it safe, reliable and affordable. And, if you ask me, it doesn't look half bad either. We don't focus on politics. We focus on making sure the brakes work correctly. We don't much care how you dress, talk or who associate with. We care about making sure you can safely get from point A to point B with peace of mind. Gas costs money...your money. We took that into account when we designed this car for you. See that? That's a car. We made it for you...all of you. Come take a look when your schedule allows. We'll be here."

Posted by: Orson at November 19, 2024 05:12 PM

Here's a good car we made. Give us money and you can drive it away and we won't know or care where you've taken it or what you're doing with it.

And that's not counting the money from their spouse they spend.

Culture changes, and the novelty of excluding yourself (and your business) from what a vast majority of citizens see as bizarre stupidity and oversaturation of politics/ sex, might now be a winning ticket. Not just leaving politics out of the mix, but specifical highlighting that you're doing so. I'm not just talking about cars. I would wager if Pepsi did that right now they would steal a good piece of Coke's market share (forcing them to take a similar position to get it back).

**318** Honestly its not THAT stupid of a move by Jaguar.

After all, they sell luxury cars that don't perform particularly well, and the people that buy their overpriced crap are going to be wealthy, and more likely to be leftists. But its still not going to actually help their sales, it just won't hurt much IMO.

Bud Light, on the other hand, was looked down on as 'lower-class' swill by the leftists, its customer base was primarily working class men, and in today's market its never been easier to get a cheap beer alternative.

So, its stupid to think its going to GAIN them anything, but it won't hurt them nearly as badly as Bud Light.

It is unclear if the effort will get a vote or if rules in the Capitol will be changed, but the move comes just two weeks after Democrat Sarah McBride became the first openly transgender person elected to Congress.

Speaking to reporters on Tuesday, Mace characterized this specific measure as an attempt to protect women's rights."

406 Speaking of British cars:

My mother didn't learn to drive until she was in her 30s. Her first car, given to her for free by a friend, was the most unusual car you ever saw: It was an antique British Morris Minor bread delivery truck. Old-school delivery trucks normally have the steering wheel on the "wrong" side -- but because this was originally manufactured in the UK for the British market, the "wrong" side for the steering wheel was on the *left* -- it ended up being on the correct side when driven in the US!

It was very small for a bread delivery truck, so ended up being approximately the same size as an American car. It's main problem! Ran on a scooter engine. Had the least amount of get-up-and-go of any car ever manufactured. Max speed ~25mph, achieved after about a minute of building up momentum.

That was the car my family had when I was a kid. It had no seats other than the driver's seat - the kids just goofed around in the flat back area. When it finally broke down, there was no way to fix it, because not a single car-repair shop had the parts or had even heard of such a vehicle.
